

Futures 2010 ETF Guide

These U.S.-listed ETFs traded more than 10,000 units a day, on average, the last three months of 2009. They are broken down by category and ranked by volume. A sub-category further describes the investment goal of the product. Note that while net assets are listed, these can vary considerably over time. The expense ratio is the percentage of fund assets that may be withdrawn each year to pay operating expenses. If futures or options are listed on the ETF, the exchange, or exchanges, that lists those products is reported in the last two columns.
